

STEEL

PIPING SYSTEM

Complete Solution for Fire-fighting, HVAC & Plumbing

INTRODUCTION

SHIELD is a company created to cater to the infrastructure, fire protection and building services industries with a comprehensive range of products designed to be competitive and of assured quality.

We stay ahead of today's evolving market requirements by committing to a program of continued research and development.

We are able to maintain our high standards by ensuring that our worldwide manufacturing networks are the most advanced in the industry in Europe, Asia and America in terms of quality and delivery lead time. Our fully experienced and professional staff is there to provide engineering expertise and after sales service exactly when you need it.

Combine this with highly responsive and customer focused network of distribution centres around the world, you will find that customer satisfaction is what we excel at.

We are justifiably proud of our global client base. With offices and facilities in the UK and Middle East, we are able to comprehend the specific needs of your particular region.

Today, SHIELD proudly serves clients across the Middle East by supplying UL listed and FM approved Steel pipes and fittings from UAE to the highest quality standards.

TABLE OF CONTENTS

1 - 25 — Steel Pipes

4	Seamless Pipe - Manufacturing Process
6	Seamless Pipe - Technical Data
8	ERW Pipe - Manufacturing Process
10	ERW Pipe - Technical Data
15	Steel Pipe - Technical Data
21	Steel Pipe - Chemical Composition & Mechanical Properties
21	Steel Pipe - Dimensional Tolerance & Weight
23	Steel Pipe - Storage & Handling
25	Steel Pipe - Employee Protection

26 - 36 — Threaded Fittings

28	Threaded Ductile Iron Fittings
29	Elbow 90° - SDT-100

SHIELDTM

Trusted Worldwide

[illegible]

Steel Pipes

Seamless & ERW

for numerous applications

Steel pipe is strong, tough and durable. Steel pipe have good excellent corrosion resistance and smooth finishing characteristics. Steel tubes are widely used in industrial and domestic applications.

Seamless Pipe

Manufacturing Process:

1. Round Billets

2. Rotary Hearth Furnace

3. Piercing

7. Cooling Bed

8. Batch Saw Cutting

9. Straightener

13. Seamless Pipes

A. For Galvanized Tubes
(Available upon request)

i. Pickling

ii. Flux

iii. Drying Furnace

viii. Visual Inspection

ix. Threading

x. Thread Inspection

B. For Black Tubes
(Available upon request)

i. Threading

ii. Thread Inspection

iii. Black Enamel Paint

Seamless Pipe

Manufacturing Process:

Seamless Pipe

“

SHIELD Steel pipes are long, hollow tubes that are used for a variety of purposes. They are produced by two distinct methods, which result in either a welded or seamless pipe.

PE: Plain End, RG: Rolled Groove, HDG: Hot-dipped Galvanising:

- ▶ Yield Strength (min): 195 MPa
- ▶ Ultimate Tensile Strength: 320 to 460 MPa
- ▶ Minimum Elongation: 20%
- ▶ Galvanising: Galvanizing comply with AS1650
- ▶ Threading: AS 1722-1

TOLERANCES:

Outside Diameter as per above table;

- ▶ Thickness: Light Tube -8%, Medium and Heavy Tubes -10%
- ▶ Weight: Single Tube +10% -8%, Quantity - 150 metres and above of one size & class ±4%
- ▶ Length: 6.5 metres ±0.08 metres.

“ Our pipes conform to FM* (Factory Mutual) approved and UL* (Underwriters Laboratories) listed and adhere to ASTM A 53 production standard. Our pipes also conform to AS 1074:1989 production standard from Australia.

”

STEEL Pipes Application in *Oil & Gas Industry*

SHIELDTM
Trusted Worldwide

SHIELD provides a complete range of tubular products for the world's infrastructure, fire protection & building service industries.

Steel Pipe

				Note: For Seamless Pipes Tolerance shall be -12.5%, + not limited	Single Tube Light: +10%, - 8% Med & Heavy: ± 10%								
				Medium & Heavy: + not limited, - 10%	Tolerance - Exact Length: +6mm, -0 Approximate length: ±150mm								

E = ERW
 S = Seamless
 WT = Wall Thickness

STEEL Pipes Application in **Construction Industry**

SHIELDTM
Trusted Worldwide

Our Manufacturing process, which meets highest customer satisfaction level, relies on a strong global Quality Management System based on ISO 9001 standard.

Steel Pipe

Storage & Handling:

General Requirements and Restrictions on Storage and Handling:

Material shall be handled & stored properly to avoid any damage to life, property & environment.

Materials shall be separated according to type, size and stacked on well drained, flat and unyielding surface.

A minimum of 800mm wide passageway should be allowed in between piles for inspection and removal.

All passageways shall be kept clear of dry vegetation, greasy substance and debris.

Proper action plan should be there for storage and equipments with proper manoeuvrability for vehicles carrying materials.

High piles shall be staggered backside at suitable intervals in height.

Material stored on site shall be protected from atmospheric actions to avoid deterioration.

Personal Protective Equipment such as hard hats, steel toed boots, gloves etc., must be worn.

Material handling manual/guide should be provided for managing the material properly.

Dos and Don'ts

Never drag or roll individual pipes or bundles.

Never throw or drop pipes from vehicle.

Never use metal hooks, slings or chains when handling pipes.

Never stack pipe bundles more than 3 meters or 3 bundles high

Never place pipes in contact with lubricating or hydraulic oil, gasoline, solvent, or other aggressive materials

Don't remove pipe bundle from bottom layer

Never store pipes near sharp objects.

Always store pipes on flat, firm ground, able to withstand the weight of the material and lifting apparatus with stoppers.

Always use non-metal slings when handling pipes (e.g. nylon or polypropylene).

Always exercise special care when handling pipes in wet or frosty conditions, since they may become slippery.

Each stack shall have pipes of the same type and size only.

Always store pipes/fittings away from direct sunlight, rain, grass and water.

Always allow some bending deflection when pipes are loaded and unloaded.

Always protect pipes with opaque sheet or tarpaulin.

Steel Pipe

Employee Protection:

A list of the key requirements to protect employees, whether it is construction or repair of single or multi-storey buildings and bridges, or other structures where steel erection occurs.

Experienced or Certified or Knowledgeable employee required for lifting or handling equipment.

Personal Protective Equipment such as hard hats, steel toed boots, gloves etc., must be worn.

Load-related forklift, cranes or hoists must be used for handling.

Restrain pipes properly so they may not roll, slip, slide or fall over while storing.

Ensure that the crane is positioned directly over the load to prevent the pipes from swinging.

Equipment/Speed limits and load charts must be prominently displayed.

Load/Unload material from truck which is parked only on even surface.

“
Pipe Tee has a T-shape having two outlets, at 90° to connect to the main line. It is a short piece of pipe with a lateral outlet. Pipe Tee is used to connect pipelines with a pipe at a right angle with the line. Pipe Tees are widely used as pipe fittings.

Threaded Fittings Installation

1

Pipe Threads

- ▶ Pipe threads should be done according to the matching thread of fittings for BSPT thread BS21 or ISO 7/1(Tapper); For NPT thread, ASME B1.20.1, prior to installation the thread should be checked with a quality thread gauge and ensure that it is compatible with the pipe.

2

Clean Threads

- ▶ Fabricated threads should be clean and free of rust and foreign particles prior to do the application of sealant
- ▶ Ensure no bumps or first three threads, no broken teeth and other defects affecting the installation.

3

Sealant Application

- ▶ A moderate amount PTFE tape is recommended. Tape should be applied evenly across the full length of the pipe threads. While using PTFE tape, a minimum of three overlapping wraps should be applied along the full length of pipe thread.
- ▶ Wrapping of tape should be started from the second thread and towards the direction of threading.

4

Tightening

- ▶ Pipe can be tightened either by manually or by an automatic machine. If tighten manually, firmly tighten the fittings by hand. With the pipe firmly secured, advance the fitting two to three complete revolutions using a pipe wrench. If tightening is done by automatic machine, strictly follow the parameters specified by machine manufacturer. The end face of the steel pipe connected to the pipe fitting must be flush, the thread should not be slanted, and there should be no ellipse or bending phenomenon, otherwise the pipe will not be straight after connection.
- ▶ When tightening with wrench, pay attention to prevent the product from being broken due to screwing of the square side. The best installation method is to fix the pipe fitting and twist the steel pipe to ensure the product is safe.

5

Test and Inspection

- ▶ Once the installation is done, flushing should be done on the system and followed by pressurizing, inspect for any leak. If a leak is detected, advance the fitting to tighten and retest the inspection. Do not backoff fittings during or after tightening. Always depressurize and drain before attempting to disassemble, remove or adjust any pipe component.

6

Maintenance

- ▶ Shield Threaded Fittings for Fire Fighting / Chilled Water application do not require any ongoing maintenance. Always follow generally accepted piping principles when caring for a piping system and ensure the entire system is as per NFPA standard/relevant standards.

* Don't over tight these fittings as it may leads to failure of threads or even cause cracks and leak.

“ SHIELD threaded steel fittings are UL listed and FM approved for water line and fire protection applications. ”

[illegible]

Grooved Ductile Iron Fittings

for Fire Fighting, HVAC & Water

**Factory
Mutual
System**

With the help of SHIELD Grooved fittings the installation at site is faster, ease of maintenance, flexibility, noise cancellation, vibration reduction and sustainability can be achieved.

Grooved Fittings

Description:

The SHIELD Grooved System provides an economical and efficient piping system solution and offers significant benefits when compared to conventional types of pipe connections including:

- ▶ Faster Installation
- ▶ No need for welding or heating, the SHIELD System ensures a safer and reliable working environment.
- ▶ Ensures easy alignment
- ▶ Reduces noise and vibration
- ▶ Easy to install and remove in case of any maintenance requirements

SHIELD Grooved Systems:

Wide range of coupling and fittings for piping applications in Air Conditioning, Fire Fighting Systems and water pipelines etc.

SHIELD Grooved Systems offer 3 types of couplings:

- ▶ High Pressure Couplings (Flexible)
- ▶ Medium Pressure Couplings (Rigid, Flexible)
- ▶ Light Pressure Couplings (Rigid, Flexible)

Material:

SHIELD Grooved Coupling housing and other grooved fittings are cast from Ductile Iron to ASTM A536 Grade 65-45-12 in red paint or hot dipped galvanized, bolts are carbon steel to ISO 898 - 1 class 8.8 heat treated, hot dipped galvanized nuts and bolt can also be supplied upon request.

Gasket (C shaped):

Shield Grooved Coupling are available in various types of gasket.

Coupling with EPDM rubber gasket are widely used around the world and it conforms to ASTM D2000-1, Grade A.

It is important to use the gasket that suits your application, use the table below to select the optimum gasket.

Material	Temperature Range	Dimensions	Threads
▶ EPDM	▶ -34°C to +110°C	▶ Green Strip	▶ Hot water service, variety of diluted acid, oil free air, chemical. This is NOT recommended for Petroleum services.
▶ Nitrile	▶ -29°C to +82°C	▶ Orange Strip	▶ Petroleum products, vegetable and mineral oils, air with oil vapours. This is NOT recommended for hot water.
▶ Silicone	▶ -34°C to +177°C	▶ Red Gasket	▶ +66°C or for hot dry air over +60°C. Dry heat and air without hydrocarbons up to +177°C and certain chemicals.

SHIELD Grooved Coupling Gaskets must be lubricated on the lips and outside back prior to assembly using SHIELD lubricant or equivalent for a wet system.

However for a dry system SHIELD recommends using a silicone based lubricant.

NOTE: Petroleum based lubricants should NOT be used at all.

SDG-25

Flexible Coupling - Standard

SHIELD Flexible Couplings allow controlled angular movement of the pipe to assist alignment and installation. The advantage of flexibility must be considered in the design or hanger and support spacing.

Grooved Fittings

Flexible Coupling - Light:

SDG-21:

Nominal Size	Pipe O.D.	Maximum Working Pressure	Dimensions			Bolt/Nut No. - Size
			X mm	Y mm	Z mm

6	168.3	300	200.0	266.0	52.0	2-M16 x 85
10	273.0	300	320.0	398.0	64.0	2-M20 x 115

SDG-21
Flexible Coupling - Light

“SHIELD SDG-21 is designed for a maximum working pressure of 300psi. The flexibility benefits of this coupling can be used in applications where high pressure is not required.”

Grooved Fittings

Rigid & Flexible Coupling - Installation Instruction:

Pipe Preparation

- ▶ Check pipe end for proper groove dimensions and to assure that pipe end is free of indentations and projections that would prevent proper sealing.

Lubricate Gasket

- ▶ Check gasket to ensure it's compatible for the intended service.
- ▶ Apply thin lubricant to the outside and sealing lips of the gasket.

Gasket Installation

- ▶ Slip the gasket over one pipe, making sure the gasket lip does not over-hang the pipe end.

Alignment

- ▶ After aligning two pipe ends together, pull the gasket into position, centering between the grooves on each pipe.
- ▶ The gasket should not extend into the groove on either pipe.

Housing Installation

- ▶ Remove one bolt & nut and loosen the other nut. Place one housing over the gasket, making sure the housing keys fit into the pipe grooves.
- ▶ Swing the other housing over the gasket and into the grooves on both pipes.
- ▶ Re-insert the bolt and connect two housings.

Tighten Nuts

- ▶ Firstly hand tighten nuts and make sure oval neck bolt completely fits into bolt hole.
- ▶ Then securely tighten nuts alternatively and equally to the specified bolt torque by using torque wrench or spanner.

Grooved Fittings

Rigid & Flexible Coupling - Installation Instruction:

Assembly Completed - Rigid Coupling

- For Rigid Coupling, keep the gaps at bolt pads evenly spaced. Gaskets can't be seen visually.

Assembly Completed - Flexible Coupling

- For Flexible Coupling, two housings should be iron to iron connected. Gaskets can't be seen visually.

Specified Bolt Torque:

ANSI Bolts

Bolt Size	Dimensions	
	Lbs/ft.	N.m
3/8	30/45	40-60
1/2	80/100	110-135
5/8	100/130	135-175
3/4	130/180	175-245
7/8	180/240	245-325

CAUTION

- Proper torquing of bolts is required to obtain specified performance.
- Over torquing the bolts may result in damage to the bolt and/or casting which could result in pipe joint separation.
- Under torquing the bolts may result in lower pressure retention capabilities, lower bend load capabilities, joint leakage and pipe joint separation. Pipe joint separation may result in significant property damage and serious injury.

Angle Pad

NOTE: Refer to UL/FM certificates for more details.

Grooved Fittings

Angle Pad - Installation Instruction:

Pipe Preparation

- ▶ Check pipe end for proper groove dimensions and to assure that pipe end is free of indentations and projections that would prevent proper sealing.

Lubricate Gasket

- ▶ Check gasket to ensure it's compatible for the intended service.
- ▶ Apply thin lubricant to the outside and sealing lips of the gasket.

Gasket Installation

- ▶ Slip the gasket over one pipe, making sure the gasket lip does not over-hang the pipe end.

Alignment

- ▶ Bring together and align the two pipe ends to be joined. Ensure proper alignment and slide the gasket into position, properly centering it between the grooved portions of each pipe.. No part of the gasket should protrude into the groove of either pipe.

Insert Bolts and Nuts

- ▶ Insert the bolts and nuts and tighten the nuts evenly by alternating sides until metal-to-metal contact to ensure a better joint.

Contact

- ▶ Firstly hand tighten nuts and make sure oval neck bolt completely fits into bolt hole.
- ▶ Then securely tighten nuts alternatively and equally to the specified bolt torque by using torque wrench or spanner.

Note:

- ▶ It is important to keep hands away from coupling openings during tightening.
- ▶ No partially assembling for coupling is allowed which might cause drop hazards.
- ▶ Visual inspection of each joint is critical. Improperly assembled joints must be correct. Tighten the nuts by another one quarter to one half turn to make sure the bolts and nuts are snug and secure.
- ▶ Never exceed torque. Excessive tightening of nuts may cause a bolt or joint failure.
- ▶ Refer to UL/FM certificates for more details.

SDG-16
Adaptor Flange

Grooved Fittings

Grooved Flange - Installation Instruction:

Pipe Preparation

- ▶ Check pipe end for proper groove dimensions and to assure that pipe end is free of indentations and projections that would prevent proper sealing.

Lubricate Gasket

- ▶ Check gasket to ensure it's compatible for the intended service.
- ▶ Apply thin lubricant to the outside and sealing lips of the gasket.

Gasket Installation

- ▶ Slip the gasket over one pipe, making sure the gasket lip does not over-hang the pipe end.

Housing Installation

- ▶ Remove bolts and nuts, place two housings over the gasket, making sure the housing keys fit into the pipe grooves.
- ▶ Re-insert the bolts and hand tighten the nuts.

Tighten Nuts

- ▶ Securely tighten nuts alternatively and equally to the specified bolt torque by using spanner.

Connect Mating Flange

- ▶ Align flange bolt holes with mating flange (or valve) bolt holes.
- ▶ Insert a standard flange bolt through bolt hole and hand tighten a nut.
- ▶ Insert another bolt opposite the first and hand tighten a nut. Continue this until all bolt holes are fitted.
- ▶ Tighten nuts evenly to specified bolt torque, so flange faces remain parallel. Assembly completed.

Grooved Fittings

Specified Bolt Torque:

Metric Bolts

Bolt Size	Dimensions	
	Inch	
M10	30/45	40-60
M12	80/100	110-135
M16	-	-
M20	-	-
M22	-	-
M24	-	-

Factory Mutual System

CAUTION

- ▶ Proper torquing of bolts is required to obtain specified performance.
- ▶ Over torquing the bolts may result in damage to the bolt and/or casting which could result in pipe joint separation.
- ▶ Under torquing the bolts may result in lower pressure retention capabilities, lower bend load capabilities, joint leakage and pipe joint separation. Pipe joint separation may result in significant property damage and serious injury.

SDG-42

Mechanical Tee - Threaded

Bolt Size	Recommended Bolt Torque N - m
3/8	40 ~ 60
1/2	110 ~ 135
5/8	135 ~ 175
3/4	175 ~ 245
7/8	245 ~ 325

The mechanical tee and cross features a gap between the bolt pads. Do not attempt to bring bolt pads together, which would result in metal to metal when tightening bolts and nuts. Note that excessive torque may cause joint failure - the following table provides recommended bolt fastening torque.

“*SHIELD Mechanical Tees allow a direct branch connection to be made on a pipe run where sufficient space allows a hole to be cut. Material: Ductile Iron ASTM A536. Gasket Standard EPDM. Threads are available to BSPT or NPT and can be supplied in red coating or hot dipped galvanized.*”

Mechanical Tee - Grooved Outlet

NOTE: Refer to UL/FM certificates for more details.

Grooved Fittings

Threaded & Grooved Mechanical Tee - Installation Instruction:

Pipe Preparation

- ▶ Clean the gasket sealing surface within 16mm of the hole.
- ▶ Visually inspect the sealing surface for defects that may prevent proper sealing of the gasket.
- ▶ Don't drill the hole on weld line.

Remove Burrs

- ▶ If any burrs or slug exists at the pipe hole, please remove them before assembly, to protect the gasket and avoid leakage.

Gasket Installation

- ▶ Insert the gasket into outlet housing making sure the tab in the gasket line up with the tab recesses in the housing.
- ▶ Align outlet housing over the pipe hole making sure that the locating collar is in the pipe hole.

Alignment

- ▶ Align the strap around the pipe, insert the bolts and tighten the nuts finger tight.

Tighten Nuts

- ▶ Alternatively and evenly tighten the nuts to the specified bolt torque.

Assembly Completed

- ▶ There should be even gaps on two sides between upper and lower housings.

ANSI Bolts

Bolt Size	Dimensions	
	Lbs/ft.	N.m
3/8	30/45	40-60
1/2	80/100	110-135
5/8	-	-
3/4	-	-
7/8	-	-

CAUTION

- ▶ Proper torquing of bolts is required to obtain specified performance.
- ▶ Over torquing the bolts may result in damage to the bolt and/or casting which could result in pipe joint separation.
- ▶ Under torquing the bolts may result in lower pressure retention capabilities, lower bend load capabilities, joint leakage and pipe joint separation. Pipe joint separation may result in significant property damage and serious injury.

Our mission is to deliver value to our customers through product development, manufacturing excellence, and supply chain management.

Pipe Support & Accessories

for Strong Foundation of Piping System

**Factory
Mutual
System**

With the help of SHIELD Pipe Support system the load from a pipe to the supporting structures is transferred. The pipe support provides 4 main functions to the system which are to anchor, guide, absorb shock, and support a specified load.

Pipe Support

Description:

SHIELD Pipe Support & Accessories feature a complete range of Hangers, Clamps, Rubber Support Insert, Bolt, Nut, Washer, Threaded Rod, U-Bolt, in a wide variety of configurations in sizes from ½” to 24”.

SHIELD pipe support and accessories are UL listed and FM approved for water line and fire protection applications.

“

SHIELD Pipe Support & Accessories feature a complete range of Hangers, Clamps, Rubber Support Insert, Bolt, Nut, Washer, Threaded Rod, U-Bolt, in a wide variety of configurations in sizes from ½” to 24”.

SHIELD pipe support and accessories are UL listed and FM approved for water line and fire protection applications.

”

Material	Available Sizes	Standards	Finish
▶ Mild Steel/Low Carbon Steel	▶ ½” to 24”	▶ ASTM ▶ ANSI ▶ MSS-SP 69, 58 ▶ WW-H-171E ▶ A-A-1192 ▶ ISO 10683	▶ Pre-Galvanized ▶ Electro Galvanized ▶ Hot Dipped ▶ Galvanized

Pipe Support

Swivel Ring Hanger:

Features:

Designed for the suspension of non-insulated stationary pipe lines. To use as pipe support in-line with NFPA 13 requirements. The insert nut allows a vertical adjustment after installation, is tapped to NFPA reduced rod size standards.

Material & Finish:

Federal Specification WW-H-171E & A-A-1192 (Type 10)
Manufacturers Standardization Society MSS SP-69 & SP-58 (Type 10)
UL Listed/FM Approved.

Material & Finish:

Pre-Galvanized coil adheres to ASTM A653 G90
Low Carbon Steel - Electro Galvanized to ASTM B633
Low Carbon Steel - Hot dipped galvanized to ASTM A123
Low Carbon Steel - Zinc Flake Coating to ISO 10683

5	1/2	4 5/8	1 5/8	5 5/8	8 3/8	2000
6	1/2	5 5/8	2 1/4	6 1/2	9 13/16	2650
8	1/2	6 13/16	2 7/16	7 15/16	12 1/4	4050

NOTE:

- ▶ Swivel Nut is coming along with hanger.
- ▶ Swivel Nut is available for 10mm and 12mm Rod size
- ▶ Swivel Hanger is also available in SS material upon request.
- ▶ Refer to UL/FM certificates for more information.

Pipe Support

Clevis Hanger:

Features:

Designed for the suspension of non-insulated stationary pipe lines. To use as pipe support-line with NFPA 13 requirements.

Approval:

Federal Specification WW-H-171E & A-A-1192A (Type 1)
Manufacturers Standardization Society MSS SP-69 & SP-58 (Type 1)
UL Listed/FM Approved.

Material & Finish:

Pre-Galvanized coil adheres to ASTM A653 G90
Low Carbon Steel - Electro Galvanized to ASTM B633
Low Carbon Steel - Hot dipped galvanized to ASTM A123
Low Carbon Steel - Zinc Flake Coating to ISO 10683

SD-HC:

SD-HC

3 1/2	1/2	4 1/2	6 1/2	1 1/4	3 7/8	3/8	1250
4	5/8	5 1/2	7 11/16	1 3/4	4 11/16	3/8	1500
5	5/8	6 1/8	9 1/8	1 7/8	5 5/16	1/2	2000
6	3/4	6 7/8	10 1/8	1 5/8	6	1/2	2650
8	7/8	8 3/4	12 7/8	2 1/8	7 7/8	5/8	4050

NOTE:

- Use of an upper locknut ensures proper performance.
- "D" Adjustment (Top of cross bolt to bottom of hanger rod nut).
- When an over-sized clevis is used, a pipe spacer should be placed over the clevis bolt to prevent the lower U-strap from moving inward.
- Clevis Hanger is also available in SS material upon request.
- Refer to UL/FM certificates for more information.

Pipe Support

Pipe Clamp with Lining:

Features:

- ▶ Designed for Horizontal, vertical and suspended installations
- ▶ Suitable for Steel, copper and PVC pipes
- ▶ Welded Nut M8/M10 with option of M10/M12
- ▶ Connection thread with M8/M10 dual-tapped boss
- ▶ Side Screw: 6 x 20 – Phillip head with vicer
- ▶ High rigidity due to reinforcing rib
- ▶ With highly elastic vibration control lining, vibration control tested

Approval:

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 12)
 Federal Specification WW-H-171E & A-A-1192A (Type 25)

Material:

Mild Steel & EPDM Rubber

Finishing:

Electro galvanized as per ASTM B633 Standards

SD-GE-RLC:

8	-	8	219	220, 225	DN200 (225.0)
10	-	-	-	250	DN225 (250.4)
12	-	-	-	-	-

NOTE:

- Measurements are subject to 5% tolerance.
- Other Sizes available on request.
- Hot Dipped Galvanized can be supplied upon request.

Pipe Support

Pipe Clamp:

Features:

- ▶ Designed for Horizontal, vertical and suspended installations
- ▶ Welded Nut M8/M10 with option of M10/M12
- ▶ High - Strength round welded connecting nuts
- ▶ The two locking screws allow adjustment
- ▶ Can be used as a pipe anchor point
- ▶ Suitable for installations without vibration control requirements

Approval:

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 12)
 Federal Specification WW-H-171E & A-A-1192A (Type 25)

Material:

Mild Steel

Finishing:

Electro galvanized as per ASTM B633 Standards

Pipe Support

U Strap Hanger with Lining:

Features:

- Designed for mount plain or insulated pipes
- It can be used as a pipe anchor with Rubber Support Insert also
- Vibration and Sound Control tested & verified with highly elastic lining

Approval:

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 26)
Federal Specification WW-H-171E & A-A-1192A (Type 26)

Material:

Mild Steel & EPDM Rubber

Finishing:

Electro galvanized as per ASTM B633 Standards

Pipe Support

Riser Hanger or Clamp with Lining:

Features:

- ▶ Designed to act as a rigid support / guide for vertical pipes to control the suspension in pipeline.
- ▶ Equally usable in most of the pipe types.
- ▶ Strengthened bolts for high load capacity.
- ▶ Highly elastic lining for sound and vibrations control.

Approval:

Manufacturers Standardization Society ANSI/MSS SP-69 & SP-58 (Type 8)
Federal Specification WW-H-171E & A-A-1192A (Type 8)

Material:

Mild Steel & EPDM Rubber

Finishing:

Electro galvanized as per ASTM B633 Standards

SD-GE-RRC:

- ▶ U Bolt sizes can be modified to match with Rubber support inserts.
- ▶ Alternate rod sizes for different pipe sizes are also available.
- ▶ Hot Dipped Galvanized can be supplied upon request.

Pipe Support

Rubber Support Insert:

Features:

- ▶ Very high load bearing capacity
- ▶ Dimensionally accurate as each piece is moulded
- ▶ Tongue and Groove design for small sizes
- ▶ Unique DOVETAIL lock for higher sizes
- ▶ Excellent resistance to Deterioration / Distortion
- ▶ Available with steel reinforcements for higher sizes

Material:

EPDM Rubber

NOTE:

- ▶ Measurements are subject to 5% tolerance.
- ▶ Other Sizes available on request.
- ▶ Left Handed is available upon request.
- ▶ Hot Dipped Galvanized can be supplied upon request.

Pipe Support

Beam Clamp (Non-Reversible):

Features:

Beam Clamps are designed to clamp hanger rod to the beam's top flange or bar joist. Universal open U design allows for adjustments and permissible to use in an inverted position on the bottom flange of the beam also.

Approval:

Manufacturers Standardization Society ANSI/MSS SP-69 (Type 19 & 23)
Federal Specification WW-H171E (Type 23) & A-A-1192A (Type 19 & 23)
UL Listed/FM Approved.

Material:

Ductile Iron & Malleable Iron

Finishing:

Electro galvanized as per ASTM B 633 Standards

Models:

SD-CBC/CBCA 110 - $\frac{3}{8}$ " (10mm)

SD-CBC/CBCA 115 - $\frac{1}{2}$ " (12mm)

SD-CBC 210 - $\frac{3}{8}$ " (10mm)

SD-CBC
Beam Clamp (Non-Reversible)

SD-CBC:

Models	Rod Size A Inch (mm)	Dimensions				Max. Pipe Size Inch	Max. Load Kg
		B mm	C mm	D mm	E mm		
SD-CBC/CBCA 110	$\frac{3}{8}$	21.00	40.00	49.0	42.00	4	250
SD-CBC/CBCA 115	$\frac{1}{2}$	25.00	42.50	52.0	49.00	8	750

NOTE:

- Measurements are subject to 5% tolerance.
- Other Sizes available on request.
- Left Handed is Available upon request.
- Hot Dipped Galvanized can be supplied upon request.
